ENGINEERING AND TECHNICAL SERVICES

Making Technology Work For Business

# ASHIGLOBAL Technical Services

**Ashiglobal Technical Services** is a professionally managed engineering consultancy and detailed engineering organization. We specialize in providing a wide range of services including machine relocation, dismantling, installation & commissioning, retrofitting, and upgradation—primarily for the process and flexible packaging industries.

Our core strength lies in our knowledge-driven engineering approach, cost-effective solutions, and practical execution tailored to meet specific client requirements. All business operations and project coordination are efficiently handled by our experienced and dedicated team, ensuring timely and successful project delivery.

**Ashiglobal Technical Services** offers a comprehensive range of solutions to conceptualize, design, and engineer projects tailored to the unique requirements of each client.

Our core services include:

- Engineering Services
- Basic Engineering
- Erection & Commissioning
- Detailed Engineering
- Plant Relocation
- Machine Up-gradation

## Specialization in used & old machines and plant relocation:

Metallizer, BOPET Film Plant, BOPP Film Plant & CPP Film Plants, Lamination, Extrusion-lamination, Coating, Slitter, Holography & Printing Machines.

Innovation, Designing and Technology  
can empower your business.

## Projects we Completed successfully

### BOPP & BOPET FILM LINE

WE has proven expertise in the dismantling, installation, and commissioning of BOPP and BOPET film lines across various international locations. Our team has successfully reassembled and commissioned film lines, achieving seamless production trials and delivering consistent operational performance.

We also undertake modernization of existing film lines, upgrading them to meet current industry standards. Our services include converting outdated DC systems to energy-efficient AC drives, replacing legacy PLCs with advanced automation systems,

## METALLIZER

Ashiglobal Technical Services has extensive experience in the dismantling, installation, and commissioning of both new and old metallizer machines across the globe. Our team has successfully executed projects involving complete relocation and startup of Metallizers, ensuring smooth production trials and optimal performance.

We also specialize in upgrading legacy metallizer systems to align with modern automation standards. This includes conversions from DC to AC

### Our Strength:

With our collective experience we can provide comprehensive solutions covering following areas of importance to all kind of projects & industries.

Over the years, Ashiglobal Technical Services has successfully completed more than 100 small and large-scale projects worldwide, primarily in the process and flexible packaging industries. We offer end-to-end solutions for the relocation, dismantling, installation, and commissioning of all types of packaging and film-related machinery.

To enhance machine performance and extend operational life, we have also undertaken several upgrades—modernizing systems with the latest automation technologies and advanced electrical solutions tailored to client needs.

## **Plant Dismantling, Relocation, Installation & Modernization, Electrical & Instrumentation Erection & Commissioning**

- Revamp of Power & Utility system
- Automation of Old Purchased Plants.
- Supervision of Dismantling, Shifting, Installation & Commissioning Renovation of Plants.
- New Panels Manufacturing and up gradations in old machine with new generation software base technology.
- Custom built application designing.
- Instrumentation & control system designing, Installation, Cabling , loop checking, & Maintenance
- PLC & DCS programming, Logic Development Installation& commissioning Testing and product Trial and operation.
- Erection & Commissioning of various type of plants in

## **Commissioning & Plant Start Up**

Ashiglobal's Commissioning Team is actively involved from the early stages of process design, ensuring a seamless transition from engineering to operation. The team meticulously reviews process and engineering design documents, with a strong focus on operability and safety.

In addition, we develop comprehensive operation manuals that provide detailed instructions for plant start-up, shutdown procedures, and emergency handling protocols. Our team also offers clear guidelines and on-site supervision for all pre-commissioning and commissioning activities, ensuring safe, efficient, and timely project execution.

## Associates Contractors and Sub Contractors

Ashiglobal Technical Services collaborates with a network of skilled, experienced, and dedicated contractors and subcontractors across the globe. These trusted associates enable us to execute a wide range of projects with strength, efficiency, and a strong commitment to quality—always within the defined time schedules.

Our expertise spans multiple disciplines including Civil, Mechanical, Piping, Electrical & Instrumentation, Offshore services, and other specialized industrial domains, ensuring comprehensive support for diverse project requirements worldwide.
